

Browser Extension Installation & Toolbar Pinning

How to install FrankPass in Chrome, Edge, Brave, or Firefox and lock it to your toolbar for instant 1-click access.

🧩 Step 1: Open Extensions Menu

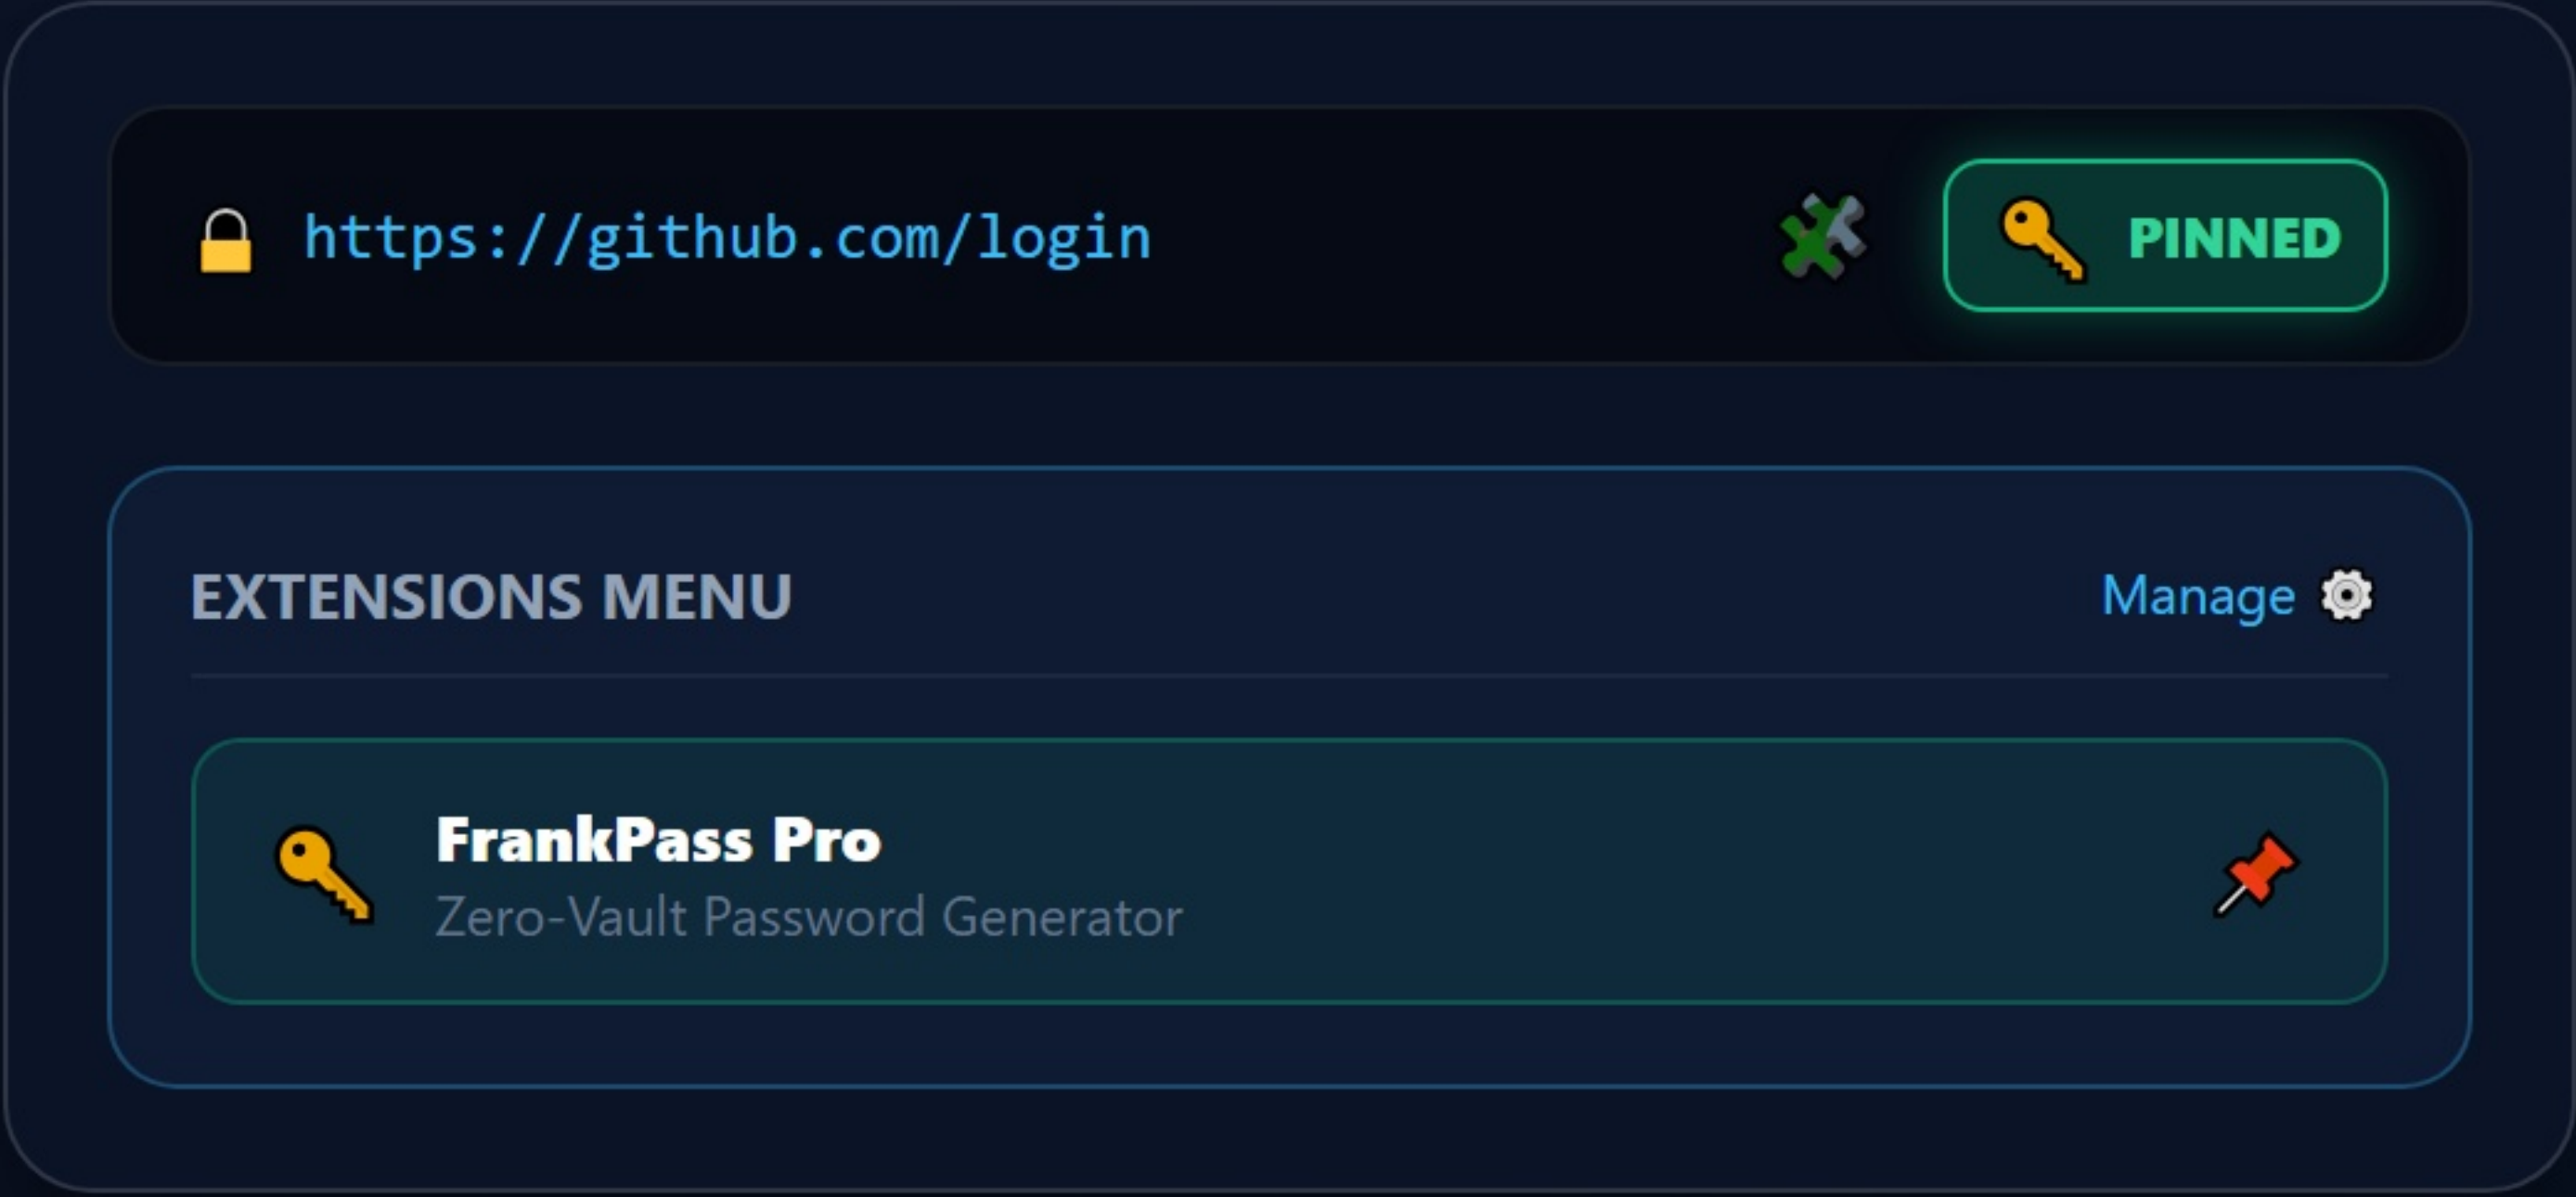

Click the **Puzzle Icon (🧩)** located at the top-right corner of your browser toolbar next to the address bar.

📌 Step 2: Pin FrankPass for Instant Access

Find **FrankPass Pro** in the dropdown list and click the **Pin (📌)** icon. The golden key logo will permanently appear on your toolbar.

⌨️ Step 3: Master Keyboard Shortcut

Press **Ctrl + Shift + F** on Windows/Linux or **⌘ + Shift + F** on macOS from any webpage to instantly summon FrankPass without moving your mouse.

Smart Domain Normalization & Auto-Detection

How the extension reads the active website and strips subdomains to guarantee deterministic password calculations.

Zero-Typing Domain Detection

When you open the extension on any tab (e.g. `https://mail.google.com/mail/u/0/`), FrankPass automatically cleans the URL and sets **Platform** to `google.com`.

Mathematical Invariance Guarantee

Whether you are on the mobile PWA, desktop app, or web generator, the normalized platform name produces the **exact same password** mathematically every single time.

Full Manual Control

Need a custom identifier for an internal server (e.g. `192.168.1.1` or `corp-vpn`)? You can easily edit or override the Platform field anytime.

 Auto-Fill into Form

1-Click Direct Autofill with Zero Clipboard Exposure

Passwords are computed in RAM and directly injected into DOM input nodes without touching the operating system clipboard.

🛡️ Infostealer Malware Immunity

Malware like RedLine and ClipBanker constantly poll your clipboard for passwords. FrankPass bypasses the clipboard entirely by injecting directly into `<input type="password">`.

⚡ 1,000,000 PBKDF2 Iterations in RAM

Calculations run locally in a sandboxed Web Worker. As soon as the password is auto-filled, the memory buffer is instantly wiped clean.

🎯 Dual Field Autofill

If an email/username is provided, FrankPass populates both the username and password fields simultaneously with a single click.

Pro Mode: Hardware-Bound 4-Digit PIN Unlock

For frequent daily logins, upgrade to Pro for 1-second autofill without retyping long passphrases 50+ times a day.

👑 Instant 1-Second Login Speed

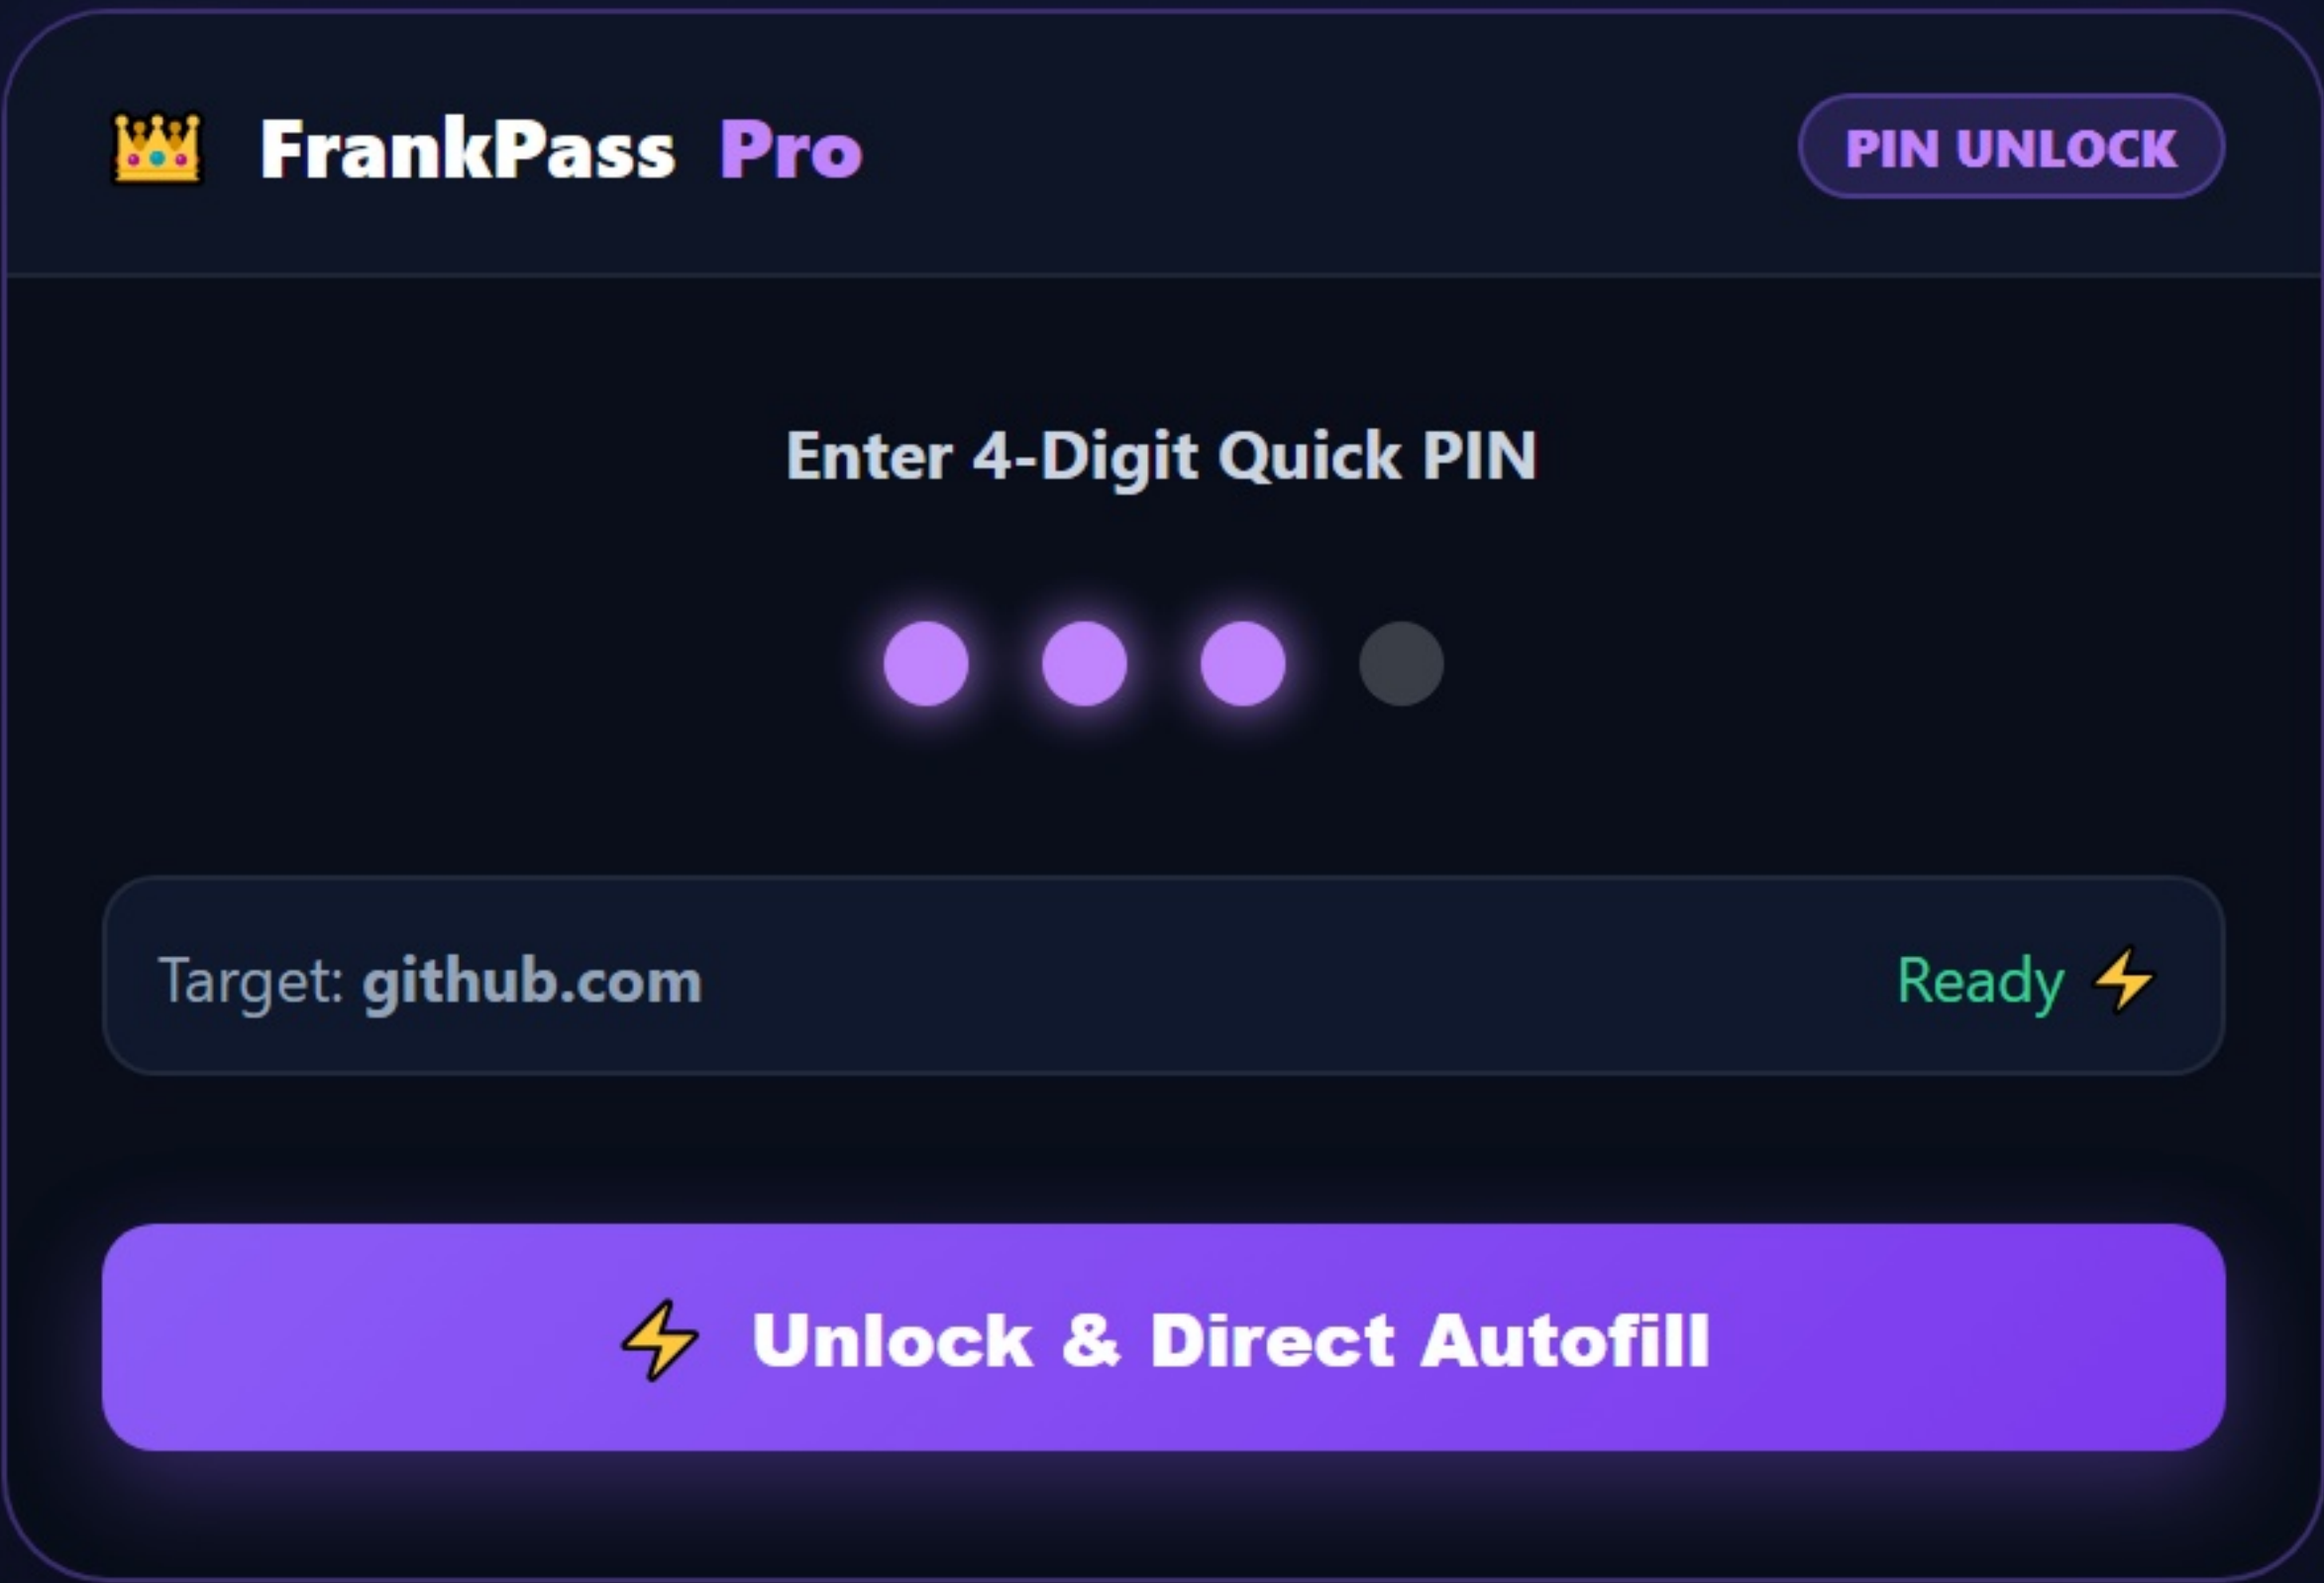

Type your simple 4-digit PIN (e.g. 4829). Your master key is locally decrypted in client RAM using AES-256-GCM and autofilled instantly.

🔒 Hardware-Bound Key Isolation

Your key never leaves your physical device. It is encrypted with WebCrypto and bound specifically to your local browser storage.

🛡️ 48-Hour Anti-Theft Timelock

If your laptop is lost or unauthorized PIN attempts exceed the threshold, FrankPass enforces a 48h emergency freeze to prevent brute-forcing.

Multi-Profile Vaults & Custom Settings

Isolate Personal vs Work identities, customize character sets, and rotate variants seamlessly across all platforms.

Profile Switching (Personal / Work / Finance)

Keep distinct cryptographic passphrases for different spheres of your life. Switching profiles shifts the mathematical derivation salt instantly.

Instant Variant Counter (v=1 → v=2)

When a website forces a 90-day password change, increment Variant from 1 to 2 without changing your master passphrase.

Custom Length & Character Rules

Fine-tune password length (12 to 64 chars) or toggle symbol rules to comply with legacy banking or government portal restrictions.
