1. The Core Philosophy: Why Cloud Vaults Fail vs. Stateless Security

The Fundamental Flaw of Traditional Password Managers

Traditional password managers (such as LastPass, 1Password, or Bitwarden) store your encrypted passwords in a centralized cloud database. While the encryption is mathematically strong, **storing data creates a permanent honey pot**:

1. **The Breach Target:** Hackers constantly attack cloud servers to steal encrypted vaults, downloading them to crack offline using supercomputers and GPU farms.
2. **Subscription Traps:** Traditional managers charge recurring fees of $36 to $60 every year to maintain their centralized server infrastructure.
3. **Data Loss on Account Loss:** If a cloud server experiences downtime or your account is suspended, you lose access to all your credentials.

The FrankPass Sovereign Breakthrough: Stateless Mathematics

FrankPass does not store passwords anywhere:

- **0 Cloud Databases:** No passwords ever touch any server or cloud database.

- **0 Local File Storage:** No passwords are saved in your browser storage or hard disk.
- **100% RAM Derivation:** FrankPass calculates your password on the fly using 1,000,000 rounds of PBKDF2-HMAC-SHA512 directly inside your computer's RAM.
- **Instant Vanishing:** The moment you close the tab or use the password, it vanishes completely from memory.

Detailed Comparison: Traditional Cloud Vaults vs. FrankPass

Feature	**Traditional Cloud Vaults**	**FrankPass Stateless Architecture**
Where are passwords saved?	On central cloud servers and databases	**Nowhere (0 Storage, 0 Database)**
Can hackers steal your vault?	Yes, if cloud servers are breached	**Impossible (No vault exists to steal)**
Offline functionality	Requires prior sync and periodic cloud check-in	**100% Offline in Airplane Mode**
Free Tier Offering	Limited devices (1 device lock), feature-gated	**Free Forever (Web, PWA & Guest Extension, unlimited devices)**
Paid Tier & Pricing	$36 to $60 every year (recurring subscription)	**$25 Pay Once / Lifetime 1-PC (Zero recurring subscriptions)**
Volume Discounts	Enterprise quote only, per-user monthly charge	**30% off (2-5 PCs) and 50% off (6-20 PCs) lifetime**
Free Trial Policy	Requires email, credit card, and marketing opt-in	**30-Day Zero-PII Offline Free Trial (No card, no email)**
Device loss recovery	Complex emergency kits and recovery keys	**Recalculate mathematically anywhere via Master Key**

🎨 **[VISUAL DIAGRAM / GEMINI IMAGE SPOT]**
Prompt for Gemini in Google Docs:
"Create a clean 3D isometric diagram comparing cloud password vaults (showing a hacker targeting a cloud server database) versus FrankPass stateless architecture

(showing a local device calculating a key inside RAM with 1,000,000 iterations and immediate memory wipe, zero cloud communication)."

---

2. How to Use the Web App (frankpass.com & PWA) Step-by-Step

The FrankPass web application works instantly on any desktop, laptop, tablet, or smartphone without installing anything. It also installs as an offline Progressive Web App (PWA).

Step 1: Set Your Master Secret Key

Your Master Secret Key is the single, memorable phrase known only to you.

- **Best Practice:** Founder Master Manikant Yadav's 2-Pillar Mnemonic Rule: (1) Personalize with your family or friend's name (e.g. Sohan, Elbert, Rohit). (2) Make an unrealistic, absurd visual sentence (like 'my friend sohan will fly on elephant', 'my brother elbert drives aeroplane on the road', or in Roman script 'meri nani rohit ke sath chand par chai pi rahi hai'). The human brain never forgets bizarre imagery, while dictionary crackers cannot guess them!
- **Strength Meter:** The built-in 4-segment strength meter verifies length and complexity.
- **Never Stored:** Your secret key is never sent across the internet; it is processed purely by your local browser processor.

🖼️ **[SCREENSHOT 1: Master Secret Key Input Field with Strength Indicator]**

FrankPass Generator

100% Offline

IN

Quick Guide: FrankPass calculates passwords locally via math. No cloud storage exists. Enter your platform, a memorable 5 to 8 word Secret Key, generate and use your password. Regenerate it anytime with the exact same inputs.

USERNAME / EMAIL (OPTIONAL)

e.g. work@gmail.com, personal, user_01

Multi-Account Isolation: Use only if you have multiple accounts on the same site. Establish a personal rule and follow it consistently.

SITE / PLATFORM

google.com

Using as: "google"

Confused? Paste the full website URL or type the app name - FrankPass handles the normalization automatically.

MASTER SECRET KEY

Copy

Zero Data Stored · Client-Side WebCrypto · 100% Offline

Step 2: Enter the Site / Platform Name (or Paste Full URL)

Tell FrankPass which service you are creating a password for.

- **Option A (Type Platform Name):** Simply type the name of the service, such as `google`, `github`, `amazon`, `sbi`, or `netflix`.
- **Option B (Paste Full Website URL):** If in doubt, copy the exact address from your browser bar (e.g. `https://mail.google.com/` or `https://yonobusiness.sbi/`) and paste it directly. FrankPass automatically cleans and normalizes it to the exact platform seed!

  🖼️ **[SCREENSHOT 2: Site / Platform Input Field with Auto-Complete Datalist]**

Step 3: Username (Salt) vs. Counter (Password Rotation)

Understanding the critical difference between the Username and Counter fields:

A. When to use the Username Field:

- Use this field when you have **Multiple Accounts on the Same Website**.
- **Example:**
  - Personal Gmail: Platform = `google`, Username = `john.personal@gmail.com`
  - Work Gmail: Platform = `google`, Username = `john.work@company.com`
  - Each distinct username acts as an independent cryptographic salt, creating a completely unique, uncrackable password for each account!

B. When to use the Counter Field (1, 2, 3...):

- Use the Counter when a bank or company forces you to **Change / Rotate Your Password**.
- **Example:**
  - When your bank mandates a password reset every 90 days:
    - Current password: Counter = 1
    - New required password: Change Counter to 2
    - Next rotation: Change Counter to 3
  - You never need to think of a new password or remember complex variations. The counter handles deterministic rotation mathematically!

🖼️ **[SCREENSHOT 3: Advanced Settings Panel with Username and Counter]**
(Insert screenshot from `guide_assets/real_ui_captures/card_advanced_open.png` here).

Step 4: Generating Deterministic 4 & 6-Digit ATM / UPI PINs

FrankPass is not just for alphabetic passwords; it features a dedicated, mathematically isolated PIN generator:

- **4-Digit PIN:** Perfect for ATM debit cards and POS terminals.
- **6-Digit PIN:** Perfect for UPI apps (PhonePe, Google Pay, Paytm, BHIM) and mobile banking.
- **Anti-Trivial Safeguard:** FrankPass automatically eliminates weak predictable sequences (such as `1234`, `0000`, `1111`) so your financial PINs remain resilient against shoulder-surfing and brute-force attempts.

> 🖼️ **[SCREENSHOT 4: Dedicated PIN Generator Tab]**

Step 5: Output Generation & Automatic Clipboard Safety

- **1-Click Copy:** Click the Copy button to copy your password into your clipboard.
- **Auto-Clear Safeguard:** FrankPass automatically triggers a 30-second countdown to wipe your system clipboard clean, ensuring other apps or malicious browser tabs cannot secretly read your copied password.

3. How to Use the FrankPass Browser Extension (Chrome & Edge)

The FrankPass browser extension brings the zero-storage deterministic engine directly into your daily web browsing workflow.

Step 1: Install from Official Stores

- **Google Chrome:** Install from the official Chrome Web Store.
- **Microsoft Edge:** Install from Microsoft Edge Add-ons.
- **Firefox / Brave / Opera:** Compatible with all Chromium and Gecko based browsers.

Step 2: Free Guest Mode vs. Founder Lifetime Pass

- **100% Free Guest Mode:** Works out of the box with zero account setup. Generates instant passwords and autofills them directly into web forms.
- **Founder Lifetime Pass (Hardware-Bound):** Binds to your physical PC motherboard. Unlocks multiple custom profile vaults, automated subdomain isolation, and advanced anti-phishing safeguards forever with no subscription fees.

Step 3: 1-Click Autofill in Action

1. Navigate to any login or registration page (e.g. `google.com/signin` or `amazon.in`).
2. Click the FrankPass extension icon or click the detected field badge.
3. Enter your Master Secret Key.
4. FrankPass automatically detects the domain, derives your password, and fills both your username and password in **one single click** directly into the DOM, completely bypassing the clipboard!

> 🎨 **[VISUAL DIAGRAM / GEMINI IMAGE SPOT]**
> *Prompt for Gemini in Google Docs:*
> *"Create a modern mockup illustration of a web browser showing a login page with the FrankPass extension popup cleanly autofilling the username and password fields with a glowing green security verification badge."*

Step 4: Anti-Phishing Domain Isolation

How FrankPass protects you from fake phishing websites:

- If a cybercriminal sends you a fake link that looks like `paypa1.com` instead of `paypal.com`, traditional password managers might mistakenly fill your credentials.
- **FrankPass mathematically isolates the domain:** The cryptographic hash for `paypa1.com` produces a completely different string than `paypal.com`. Your real password is never exposed to phishing pages!

---

4. Disaster Recovery & Security Assurance: What if My Laptop or Phone Breaks?

The Ultimate Peace of Mind: No Lost Vaults

With traditional password managers, losing your device or forgetting your master recovery key means losing access to your accounts forever.

With FrankPass:

- **Your passwords are not trapped inside a device.**
- If your laptop burns, phone drops in water, or you are travelling in another country:
    1. Simply open any web browser on any computer or phone.
    2. Visit `frankpass.com` (or open the offline PWA).
    3. Enter your Master Secret Key and the website name.
    4. **Your exact password is recalculated instantly with 100% mathematical precision!**

Mathematical Resilience: 1,000,000 PBKDF2 Iterations

FrankPass utilizes **PBKDF2-HMAC-SHA512 configured with 1,000,000 computational rounds**.

- Even if an attacker knew the website name and username, guessing your master key would require billions of dollars in supercomputing power and centuries of processing time.
- Your secrets are governed strictly by the immutable laws of mathematics.

---

5. Pricing, Volume Discounts & Transparent Community Support Channels

FrankPass operates on a zero-server economic model: because we store zero bytes on cloud servers, we never charge recurring subscription traps.

A. Volume Pricing Matrix (Hardware-Bound Lifetime License)

Plan / Tier	Physical Machines	Discount	Final Price per PC	Total Cost
Solo License	1 PC	Standard Rate	**$25.00**	**$25.00** (Lifetime)
Family / Team Tier	2 to 5 PCs	**30% OFF**	**$17.50**	2 PCs = $35.00 | 5 PCs = $87.50
Volume Power Tier	6 to 20 PCs	**50% OFF**	**$12.50**	6 PCs = $75.00 | 10 PCs = $125.00 | 20 PCs = $250.00

- **Transaction Cap:** Maximum 20 PCs per order for card limits and security verification. Larger orders can be completed in multiple batches.
- **100% Air-Gapped Independence:** Every device receives its own unique hardware-bound offline key (`FP-XXXX-XXXX-XXXX`). Devices have 0% connection or data sharing with each other.

B. 30-Day Zero-PII Offline Free Trial

- Every physical computer is entitled to a **30-Day Offline Free Trial**.
- **Zero PII Collected:** No email address, no phone number, and no credit card required.
- Verification occurs 100% offline inside your browser RAM.

C. 3 Transparent Community Discount Channels

We believe world-class privacy should be accessible to everyone:

1. **The Patron Channel ($25.00):**
   If you have the financial means, paying the full $25 supports independent, zero-cloud software development with zero investor compromise.
2. **The Silent Buyer Coupon (`PRIVACY20` -> $19.00):**
   If you are a privacy-conscious user who prefers not to post on social media, apply the

coupon code **`PRIVACY20`** at checkout on store.frankbase.com for an instant 20% discount ($19.00 total).

3. **The Community Advocate Channel (75% OFF -> $6.25):**
   Use FrankPass Pro for 10 days on the free trial. If you love the sovereign experience, post an honest review on X (Twitter) mentioning **`@frankpasshq`** and **`@mastermanikant`**. Our team will verify your post and send a single-use 75% off coupon directly to your X direct message inbox!

---

6. Psychological Threat Model & Technical FAQ

Q1: If I post about FrankPass on X, will hackers target me?

Answer (Kerckhoffs's Principle):
No. FrankPass has zero server databases and zero cloud accounts. Even if a hacker knows you use FrankPass, they gain exactly zero advantage:

1. They do not know your mental Master Secret Key.
2. They do not know your password counter (e.g. 1, 2, or 3).
3. Under Kerckhoffs's Principle of cryptography, a security system remains 100% secure even if the attacker knows every single line of code and the exact tool being used, so long as the secret key remains private.

Q2: You say privacy is a human right. What about users who cannot afford $25?

Answer:
The FrankPass Web App and Guest Browser Extension are **100% Free Forever for everyone on Earth**. For users desiring the hardware-bound Pro extension, we offer the transparent **75% off Community Advocate channel ($6.25)** or the **20% instant coupon (`PRIVACY20` -> $19.00)**.

Q3: Does the browser extension send my passwords or data over the internet?

Answer:
Never. FrankPass Pro uses the browser's built-in `window.crypto.subtle` API. It does not contain any analytics trackers, remote logging libraries, or backend API calls. You can inspect the network tab in Developer Tools or turn off your Wi-Fi: the extension functions with zero network activity.

Q4: If FrankPass company closes tomorrow, what happens to my passwords?

Answer:
Mathematics never shuts down. FrankPass passwords are deterministic mathematical equations, not stored records. We provide a single-file offline HTML runner and an open-source

Python CLI. You will always be able to recalculate your passwords on any computer, anywhere, for the rest of your life.

Q5: What if I lose my Master Secret Key?

Answer:
Because FrankPass stores zero data and contains zero backdoors, **nobody can recover a forgotten Master Secret Key**. You should choose a strong phrase that is personally unforgettable to you (such as a memorable sentence from your life combined with a number).
