

Never Store What You Can Calculate

Traditional password managers store your passwords in cloud vaults – creating a massive honeypot. FrankPass calculates passwords on-demand locally via 1,000,000 PBKDF2 iterations in browser RAM.

FrankPass Generator

100% Offline

IN

Quick Guide: FrankPass calculates passwords locally via math. No cloud storage exists. Enter your platform, a memorable 5 to 8 word Secret Key, generate and use your password. Regenerate it anytime with the exact same inputs.

USERNAME / EMAIL (OPTIONAL)

e.g. work@gmail.com, personal, user_01

Multi-Account Isolation: Use only if you have multiple accounts on the same site. Establish a personal rule and follow it consistently.

SITE / PLATFORM

google.com

Using as: "google"

Confused? Paste the full website URL or type the app name - FrankPass handles the normalization automatically.

Zero Data Stored • Client-Side WebCrypto • 100% Offline

100% Client-Side Ephemeral Math

Zero Server Database • Zero Honey-Pot Vulnerability • 1,000,000 PBKDF2 Rounds in RAM

Cloud Managers:

Store encrypted blobs on remote servers. If breached, all passwords are exposed to brute-force attacks.

FrankPass Zero-Storage:

Nothing is ever saved. The exact same inputs mathematically reproduce the exact same password in 0.1s.

💡 **Key Principle:** What does not exist on a server cannot be stolen by hackers or leaked in a data breach.

Your Master Key is a Sentence, Not a Word

Your Master Secret Key is your private cryptographic root. It converts memorable words into an unhackable entropy seed without ever leaving your device.

5 to 8 Word Everyday Sentence

Example: 'two hot samosas with green chutney on mars'. Easy for memory, impossible for supercomputers.

Natural Brain Memory:

Pick a private sentence you can easily recall. Never use single words, family names, or birthdays.

1,000,000 PBKDF2 Rounds:

Your sentence is hashed 1,000,000 times client-side. Takes billions of years to brute-force.

Crucial Rule:

Never share your master sentence with anyone. Keep an offline physical backup in a bank safe.

Spaces & Capital Letters Won't Break Your Hash

Typing on smartphones often inserts accidental spaces or auto-capitalizes letters. FrankPass automatically neutralizes these variations.

100% Space & Case Invariant

'MY SECRET 2026' = 'my secret 2026' = 'mysecret2026'. All produce the EXACT same password!

Automatic Normalization:

All whitespace is stripped and uppercase letters are lowercased before cryptographic hashing.

Mobile & Desktop Parity:

Whether your phone auto-capitalizes the first word or adds spaces, you will never get locked out.

💡 **Mathematical Guarantee:** Only the actual letters and numbers count. Spacebar differences have zero effect.

Paste Full URLs or Just the App Name

You do not need to guess platform syntax. Paste the full browser URL directly or type the plain brand name.

Smart URL Normalization

Pasting 'https://mail.google.com/...' auto-extracts 'google'. Spaces & protocols are cleanly removed.

Full URL Support:

Copy the address bar directly from Chrome, Safari, or Brave. FrankPass auto-cleans it instantly.

Banking & Subdomains:

'https://yonoretail.sbi.bank.in' cleanly resolves to 'sbi' or 'statebankofindia'.

Rule of Thumb: When in doubt, just copy and paste the entire website address from your browser.

Leave Email Blank for Single–Account Sites

The Username / Email field is completely OPTIONAL. For 90% of services where you have only one account, keep it blank!

Multi–Account Isolation Switch

Single Account (LinkedIn, Netflix, Amazon) → LEAVE BLANK

Multiple Accounts (Instagram, Work Gmail) → Fill Email

Single Login (Leave Blank):

For LinkedIn, Netflix, Amazon, Facebook, Spotify where you have 1 account. Keeps generation effortless.

Multiple Logins (Fill Handle):

If you manage multiple Instagram handles or Work vs Personal Gmail, enter handle to isolate passwords.

Golden Rule: If you only have one login on a website, establish the rule to always leave this field blank.

Website Forces Password Change? Just Increase Rotation

When a corporate policy or banking portal forces a 90-day password change, you NEVER need to invent a new Master Key.

Increment Counter: 1 → 2

Generates a fresh mathematical password for that specific site without affecting any other passwords!

Isolated Password Rotation:

Increasing Variant to 2 creates a new hash for that portal. Your other 40 passwords remain on Variant 1.

Corporate Month/Year Mode:

For mandatory monthly enterprise password policies, switch tab to Month/Year mode (e.g. 10/2026).

💡 **Formula:** Site demands new password? Increment Variant = 2. If it demands again next year, set Variant = 3.

100% Guaranteed Bank & Corporate Acceptance

FrankPass strictly enforces enterprise complexity rules so your passwords never get rejected by banking or government portals.

Strict 4-Class Character Matrix

Guarantees at least 1 Uppercase + 1 Lowercase + 1 Digit + 1 Symbol.
Zero ambiguous glyphs (No 0/O/1/I).

Guaranteed Acceptance:

Eliminates annoying rejections like 'password must contain at least one special character and number'.

Zero-Confusion Pool:

32 clean Base-32 characters prevent misreading characters when manually typing on a TV or console.

💡 **Banking Standards:** Built specifically to comply with Reserve Bank of India and global banking complexity rules.

Custom Password Length: 8 to 32 Characters

Different websites have legacy constraints. FrankPass lets you match any portal's exact character requirements in one click.

Flexible 8 to 32 Character Slider

Default: 16 Chars (100+ bits of entropy). Easily adjust down to 12 or up to 32 for specialized systems.

16 Characters (Standard):

Recommended for all modern services. Mathematically unbreakable by modern quantum supercomputers.

Legacy Portal Matching:

If an older government portal restricts passwords to max 12 chars, simply move slider to 12.

Best Practice:

Keep length at default 16 unless a specific website explicitly demands a lower limit.

RAM-Only Crypto: Gone in 60 Seconds

Passwords generated on FrankPass live exclusively in ephemeral browser RAM (SubtleCrypto) and vanish upon timeout or tab switch.
